Objective

Detail-oriented Frontend Developer leveraging an electronics background in analog circuits and amplification. Proficient in JavaScript and responsive UI design. Seeking a web development role to apply sharp, systems-level debugging logic.

Education

- | | |
|---|------|
| <ul style="list-style-type: none">NMAM Institute of Technology,Nitte
B.Tech in Electronics and Communication(Advanced Communication Technology)
8.7 CGPA | 2028 |
| <ul style="list-style-type: none">Govt PU College Brahmavara
Pre University (PCMCs)
91.33% | 2024 |
| <ul style="list-style-type: none">Govt Highschool Brahmavara

94.4% | 2022 |

Skills

- HTML
- CSS
- JavaScript
- C programing
- Vibe Coding
- Data Structures and Algorithms
- Web Development
- Frontend Development
- Circuit Design
- C++ programing
- Database Management System
- Firebase
- PCB Design
- Circuit Simulation
- KiCAD
- LTSpice
- Circuit Analysis

Projects

- Ultimate Tic Tac Toe Game**
A modern Tic Tac Toe game application built with an interactive user interface and smart gameplay features. The project supports different game modes, including single-player with adjustable AI difficulty and multiplayer gameplay. It uses a frontend-backend architecture to manage game states, player moves, and real-time updates, providing a smooth and responsive gaming experience across devices.

- **Chathuranga**

Developed Chathuranga, a strategic multiplayer board game application inspired by the ancient Indian game that influenced modern chess. The project includes interactive gameplay, turn-based mechanics, responsive UI design, and smooth user experience using modern web technologies. It focuses on logic implementation, game state management, and engaging gameplay features.

- **Route-X**

RouteX is a smart route planning web application that helps users find the shortest path between locations using free and open-source map services. It uses OpenStreetMap for map visualization and OSRM for route calculation, providing distance, estimated travel time, and interactive navigation without using paid APIs.

- **Stereo Amplifier**

A Class A Stereo Amplifier is an audio amplifier that continuously conducts current through its output transistors for the entire 360° of the input signal. It amplifies both left and right audio channels with very low distortion and excellent sound quality. Although it offers high audio fidelity, it has low efficiency (typically 20–30%) because it consumes power even when there is no audio signal, resulting in significant heat generation. It is commonly used in high-end audio systems where sound quality is more important than power efficiency.

- **SpiceCraft**

SpiceCraft is an AI-powered circuit hub that provides a centralized platform for discovering, exploring, editing, simulating, and exporting electronic circuits. It offers access to a wide range of circuit designs, component information, AI-assisted recommendations, and LTspice export support, making circuit development faster and more convenient for students, hobbyists, and engineers.

Certifications

- **Database Management System**

Completed NPTEL DBMS course from IIT Kharagpur covering SQL, normalization, ER models, transactions, and database design concepts.

- **Recent Trends In Communication And Technology Pathway From 5G Towards 6G**

Attended a three-day workshop on 5G and 6G communication technologies conducted by IEEE MTT-S and NMAMIT, focusing on future wireless networks, advanced communication systems, and emerging technology trends.

- **Fundamentals of C programming**

Fundamentals of C Programming (Coursera) is an introductory course that covers the core concepts of the C programming language, including variables, data types, operators, control structures, functions, arrays, pointers, and basic problem-solving techniques. It builds a strong programming foundation and prepares learners for advanced software development and embedded systems concepts.

- **Microsoft Azure**

Microsoft Azure Certifications validate skills in cloud computing and the Microsoft Azure platform. They cover topics such as cloud fundamentals, virtual machines, networking, storage, security, identity management, databases, and cloud services. These certifications demonstrate the ability to deploy, manage, and optimize cloud-based solutions using Microsoft Azure and are recognized by employers worldwide.

Achievements & Awards

- Worked on a patent-published Multi-Factor Authentication Door Lock System that enhances security through multiple authentication methods. Contributed to embedded system design, automation, and secure access control implementation.
